

PRINCIPLES

1. Keep your rook and king on opposite colors from the enemy bishop.
2. Use your rook to cut off the enemy king's escape routes.
3. Coordinate your rook and king to control key squares and limit the opponent's king movement.
4. Aim to drive the enemy king to the edge of the board.
5. Be aware of the stalemate possibilities when the enemy king is cornered.
6. Use the bishop to control squares that the rook cannot reach.
7. Always look for opportunities to check the enemy king with your rook.
8. Maintain flexibility in your pieces to adapt to the opponent's moves.
9. Avoid placing your king in a position where it can be attacked by the enemy rook.
10. Practice the technique of checkmating with rook and bishop against a lone king.

SITUATION

In this position, the black king is in the correct corner, making it easy for White to defend. The bishop is positioned to interpose in case of a check, preventing stalemate. White can use the rook to control key squares and force the black king into a position where it cannot escape. This scenario highlights the importance of piece coordination and the right corner strategy.

FEN: 8/8/8/8/8/1R1k4/1B6 w - - 0 1

GOAL

White's goal is to maintain control of the right corner and avoid stalemate. Black aims to use the bishop to block checks and escape the corner. The position is favorable for White, who can force a win with careful play.

STRATEGY

The strategy here is to keep the black king in the corner while using the rook to control key squares. The bishop should be positioned to interpose in case of checks, preventing stalemate. White must maintain flexibility and adapt to the black king's movements to secure a win.

MOVES

Begin by moving your rook to a8 to check the black king. If Black plays Bg8, continue with Ra7 to maintain pressure. The most accurate move order would be: 1. Ra8+ Bg8 2. Ra7 3. Kg6 Bc4 4. Ra3 Bd5 5. Rh3+ Kg8 6. Re3 Kh8.

HOW IT LINKS TO THE RULES

This lesson demonstrates the importance of maintaining flexibility in your pieces (Principle 8) and avoiding placing your king in a position where it can be attacked by the enemy rook (Principle 9). It also emphasizes the need to check the enemy king with your rook (Principle 7).
